

PROVIDING SOLUTIONS

WE DESIGN AND CONSTRUCT
INNOVATIVE GEOTECHNICAL
SOLUTIONS IN THE
COMMERCIAL AND INDUSTRIAL
BUILDING, INFRASTRUCTURE,
MARINE, MINING &
RESOURCE SECTORS

LEADING THE WORLD IN GEOTECHNICAL SOLUTIONS

GLOBAL STRENGTH AND LOCAL FOCUS

Our vision is to be the foundation and ground engineering partner of choice

Keller provides our clients with a unique solutions based partner within the Australian foundations and ground engineering sector. What makes Keller unique? We have the skills and expertise to combine the complete suite of ground improvement, structural foundations and retaining wall techniques to conceive the optimum solution for any project.

Keller's vast experience spanning the length of breadth of Australia affords us sound knowledge of the range of geotechnical challenges that can be encountered. This very experience allows us to deliver with optimum safe standards and definitive risk management.

Keller's commitment to research in product and plant development ensures that the technology offered is cost effective and efficient so that it meets the budget and programme expectations required in today's commercially competitive environment.

Our client relationships are the foundation of our business, and over the years we have developed solid partnerships in the commercial,

building, infrastructure, mining and energy sectors. These partnerships allow us to collaboratively work alongside our clients in both the design development and execution phases of a project.

Our extensive fleet of versatile and specialist foundations, ground improvement and drilling equipment is supported by state-of-the-art maintenance and workshop facilities. This ensures rapid response by our expert maintenance crews.

Keller provides our clients with financial certainty and longevity, and by being part of the connected Keller group of global companies we have access to a worldwide knowledge network that provides our Australian clients with the worlds cutting edge geotechnical engineering capability.

As of 2016 Keller achieved compliance with the Federal Safety Certification standards. This accreditation, combined with our major project management experience, enables Keller to carry out works in a Main Contractor capacity on Australian Government funded projects."

Keller provide design and construct services for a range of specific engineered solutions. The advanced capabilities of our in-house engineering and construction teams ensure we provide cost effective, fit for purpose, award winning solutions.

Our range of piling, deep foundation and ground engineering techniques is comprehensive.

STRUCTURAL FOUNDATIONS

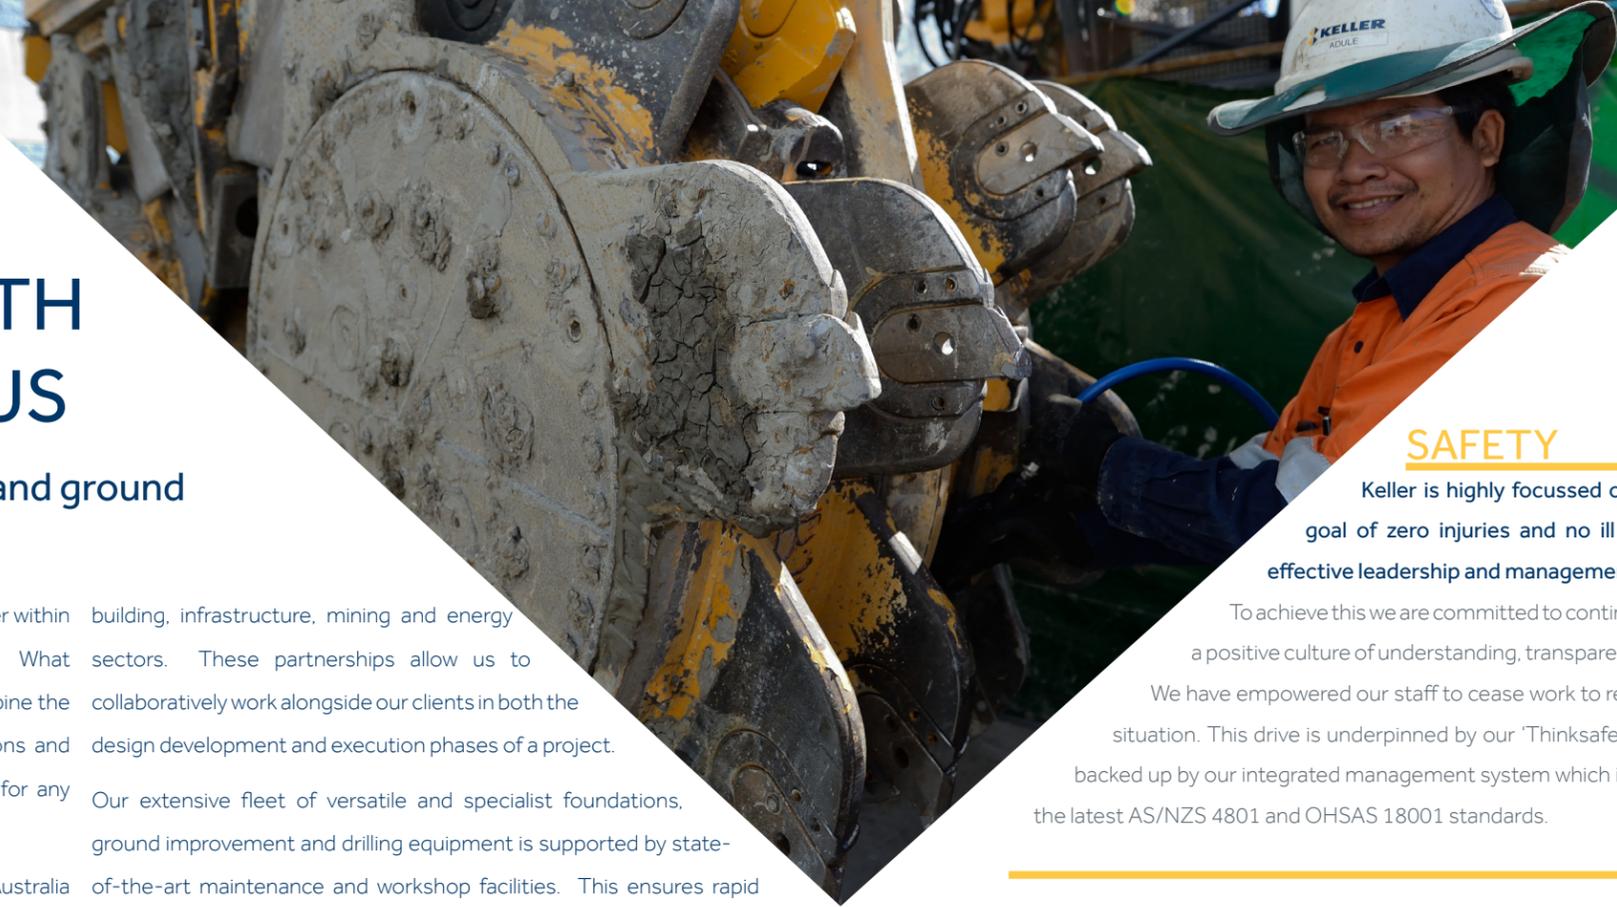

- Bored Piles
- CFA Piles
- Steel Piles
- Precast Piles
- Drilled Displacement Piles
- Franki Piles
- Atlas Piles
- Octagonal PSC Piles
- Barrettes
- Micropiles

RETAINING WALL & SLOPE STABILITY

- Secant Pile Wall
- Contiguous Pile Wall
- Cased CFA Piles
- Diaphragm Wall
- Sheet Pile Wall
- Deep Soil Mix Wall
- Soldier Pile Wall
- Ground Anchors
- Soil Nailing
- Grouted Gravity Wall

GROUND IMPROVEMENT

- Rigid Inclusions
- Deep Soil Mixing
- Mass Soil Mixing
- Dynamic Compaction / Replacement
- Vibro Compaction / Replacement
- Jet Grouting
- Compaction Grouting
- Permeation Grouting
- Rock / Fissure Grouting
- Compensation Grouting
- Mine Fill Grouting
- Slurry Cutoff Walls

SAFETY

Keller is highly focused on achieving our goal of zero injuries and no ill health through effective leadership and management.

To achieve this we are committed to continually developing a positive culture of understanding, transparency and learning. We have empowered our staff to cease work to review any unsafe situation. This drive is underpinned by our 'Thinksafe' philosophy and backed up by our integrated management system which is compliant with the latest AS/NZS 4801 and OHSAS 18001 standards.

QUALITY

Keller aim to exceed customer expectations by identifying all stakeholder requirements, and applying project specific risk management strategies to prevent adverse outcomes and enhance the delivered product.

We have developed a consistent approach to product delivery, whilst maintaining a degree of flexibility in our design and work processes to manage the variable geotechnical conditions encountered across our worksites. Keller maintain external certification to AS 9001 and implement a variety of internal assurance processes to deliver a consistently high standard of product to our clients.

ENVIRONMENT

Environmental management is a key component of our integrated management system and processes.

Environmental concerns are identified at each site so they can be assessed, prioritised and managed via a risk based approach in accordance with the hierarchy of controls. This process encompasses as assessment at design stage so that the most effective solution can be supplied to the relevant stakeholders.

Keller maintain external certification to the latest AS/ISO 14001 standards to ensure consistency and compliance whilst discharging our environmental obligations for the benefit of current and future generations.
